

7 - React Router - Link

Libraries: import **'react-router-dom'** also install **'react-router'**

Link

Provides declarative, accessible navigation around your application. Helps you to preserve the performance of a single page application.

In our app: [NavbarDisplay](#)

```
import { Link } from 'react-router-dom';

const Navbar = ({ tags: [t1, t2] }) => {
  return (
    <nav className="navbar">
      <ul>
        <li><Link to="/welcome">{t1}</Link></li>
        <li><Link to="/card/propagation">{t2}</Link></li>
      </ul>
    </nav>
  );
}
```

[NavbarDisplay](#)

```
class NavbarContainer extends Component {
  constructor(props) {
    super(props);
    this.state = {
      tags: ['Home', 'Info']
    }
  }

  render() {
    return (
      <Navbar tags={this.state.tags}/>
    );
  }
}
```
